

NOVAMPERE: RESSTENDE CONTEMPORARY TOUCH FOR THE NEW RESIDENTIAL PROJECT IN MILAN

 The functional versatility and the sober taste combined with the perfect management of the indoor atmosphere are the founding elements of the roller blinds project proposed by the reality of Agrate Brianza for the **Milan residential complex novAmpère, in the sample apartment created in collaboration with Milano Contract District**. The challenge of this residential project is summarized in the enhancement of the **large windows and the rooms with neutral tones** that caress the volumes of space, avoiding otherwise eccentric choices.

In particular, in the area dedicated to entry and living Resstende has designed the delicate shielding of the windows with curled curtains where the material effect of the white linen contributes to give vitality to

the environment.

The same fabric enriches the master bedroom, illuminating the taupe tones that cover the floor and walls. In the children's room the colours are more heated thanks to the design accessories, while the Resstende curled curtain allows a visual comfort ideal to allow the study of children. The mastery of Resstende finds expression completed also in the bathroom where the window is screened by a roller system of the **Laylight Collection** with the white **Colortex** fabric cod. 35000. The **Trevira** composition of the fabric, certified fireproof in Class 1, allows to screen the light with a delicate texture and that guarantees the right privacy in this environment. The system is enriched by the backdrop in satin finish and by handling with metal chain, for a perfect functional elegance.

IN AUTUMN, AT THEATRO, CURTAINS UP FOR RESSTENDE

 The strategic collaboration with "Theatro" continues successfully in the name of high education. Resstende is preparing for the autumn an event on October 24 at **"Theatro" in Verano Brianza, the experiential space on the outskirts of Milan, designed by Thema**. This famous company in design and construction of customized solutions for the building envelope, together with Schüco Italy, market leader for aluminum systems of high quality windows, doors and façades made this new project possible.

For some time Resstende has collaborated with this reality which is characterized as a great experimentation building, a scenographic and multi-functional brand store where culture, education, research, operations and show intersect for a mix of ideas and intentions functional to a top quality living well-being.

The new format that will see it engaged in the coming months has been realized in collaboration with Casabella.

This is a series of meetings entitled "The space of the threshold", a crossroads between architectural culture and territorial specificity, dedicated to professionals in the sector. So, **on October 24th at Verano Brianza**, Resstende will be the undisputed reference point for high-level custom-made solar shadings.

RESSTENDE IN THE KITCHEN...AND FUNCTIONALITY IS... AT HOME!

 It is in the kitchen, the warm heart of every home, that Resstende is able to best express its technical potential and its mastery with technical curtains with elegant charm and extraordinary functional features. It is precisely in this environment that **solar shading totally lose their value as a complement and finish to become true protagonists** in giving personality to the room. Beyond the **expressive richness given by the aesthetics** of the proposed models, the choice of fine fabrics and yarns make Resstende systems unicum on the market. The **antibacterial properties and the easy cleaning** that characterize these fabrics are the imprint and the concrete translation of absolute technical quality to guarantee **performance suited to the stresses that characterize the room appointed for excellence in conviviality** and preparation of meals. Resstende solutions overcome the ephemeral to embrace a **roller blind concept oriented to the satisfaction of real needs**, to sustainability over time and to the definitive disavowal of a serial product. **Each Resstende system characterizes the spaces with elegance and material uniqueness, for everyday practicality**. A capacity for customization that rises at the highest levels managing to dress in-house environments with simplicity and without intrusiveness.
