RESSTENDE
HALL 1 – BOOTH L25-M30

Resstende will be exhibiting for the first time during the MADE trade fair a number of exclusive products. The first is **Stripes**, an innovative Resstende fabric collection for roller blinds. The fabric is mounted on the blind to form two fabric layers, one behind the other, each with alternating transparent and opaque horizontal bands. By positioning the overlapping bands at different heights it is easy to create just the right level of transparency and obtain the lighting effect desired. Moving the blind up

White Inspiration

and down, the transparent and opaque bands may be aligned to produce a fully open, partially covered or fully covered effect at any window height: hence the amount of light entering the room may be perfectly adjusted as and when required. The practicability of a venetian blind may now be obtained by a roller blind, an ideal blend of sought-after style and functional design to give a touch of modernism to any room. The Stripes collection is available in a wide range of colours and in 10 different textile series, the fabrics are divided by shade and texture of the bands. The Stripes fabrics are resistant to humidity and are therefore also ideal for kitchen and bathroom windows. Furthermore choose between chain or motorized operation for a tailored system. A second novelty that will be on show at the MADE trade fair is the **White Inspiration** fabric collection: a selection of 9 all white shading and blackout fabrics, with a range of different patterns and textures to suit any taste.
